

# HAYSTACK 2023

## Top 8 search topics to teach your team members

Jетро Coenradie

**luminis.**

A story about Search, by Frank and Amy

This story is fictional, any resemblance with real people you know are purely coincidental and definitely not on purpose.

# Jетро Coenradie

**Search Relevance guy @ Luminis**

Live in the Netherlands

Father of 2 Kids (or Adults these days)

Love to be outside, ride my bike, walk, cycle

Like to learn and share knowledge

Talk to me if you want to know more about me

**luminis.**

**Amy**

**Senior Software Engineer / Architect**

**Has been working for the company for years.**

**Always on the lookout for new projects to improve her skills.**

**Likes to program in Python.**

**Frank**

**Seasoned Search Relevance Engineer**

**Started his career as a software engineer and grew into the search domain.**

**Joined the company only recently**

**Feels that all users deserve the best search experience everywhere.**

Frank walks to the office for the first time

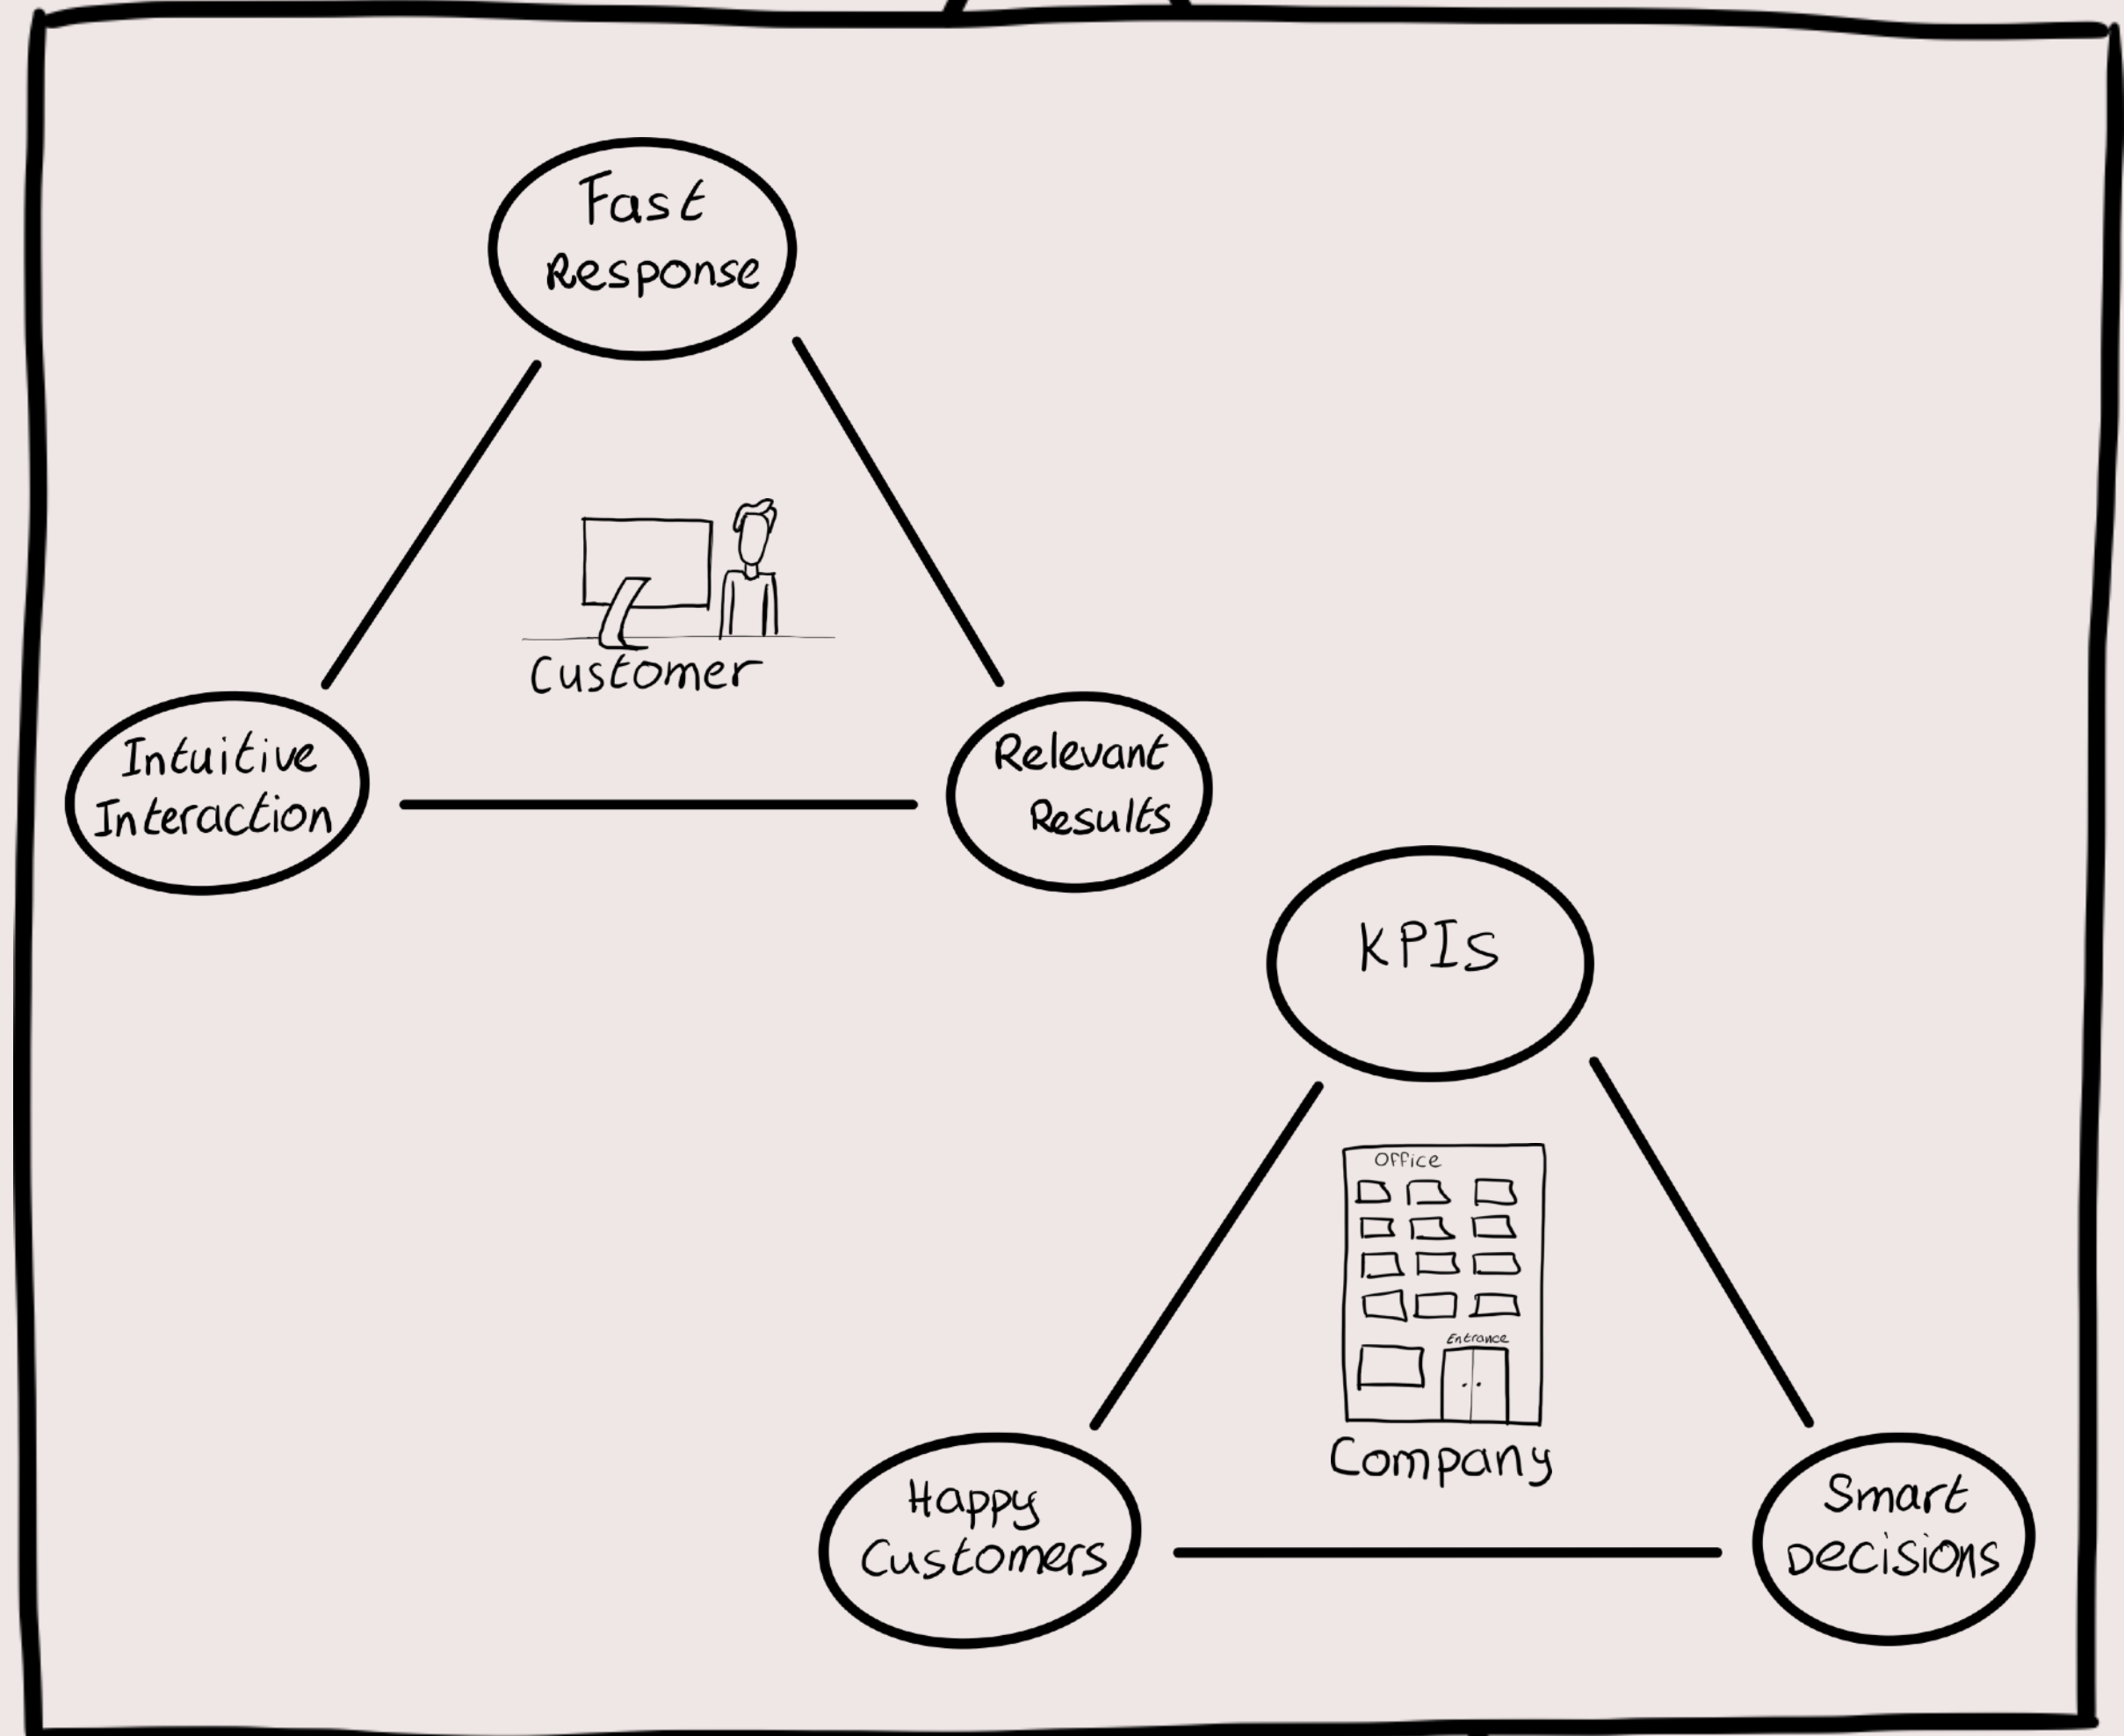

Amy walks to the office, excited to start the new project.

Frank and Amy meet for the first time.

We need a  
bigger team to  
do all this

Content

User Experience

Search Technology

Analytics

Business

- **We have different stakeholders**
- **We need multiple disciplines in the team**

---

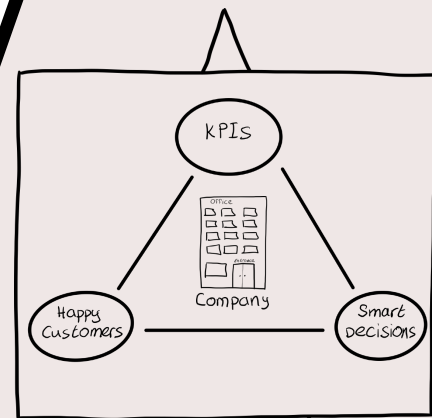

**Search is more than Technology**

---

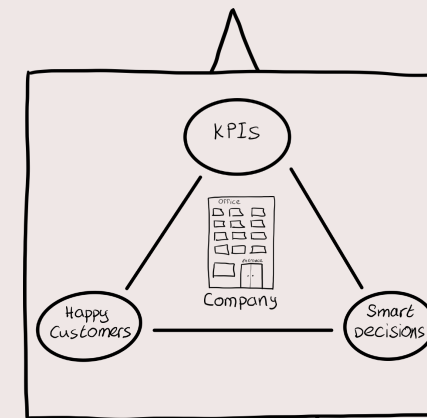

**Topic 1**

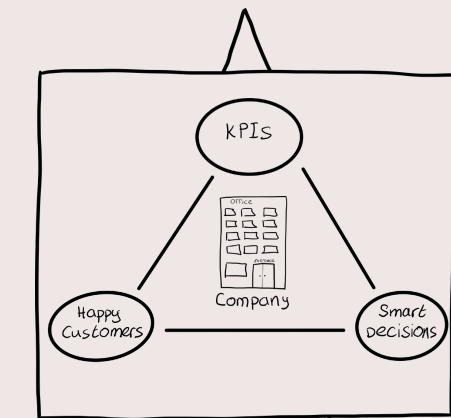

Lets talk about the content

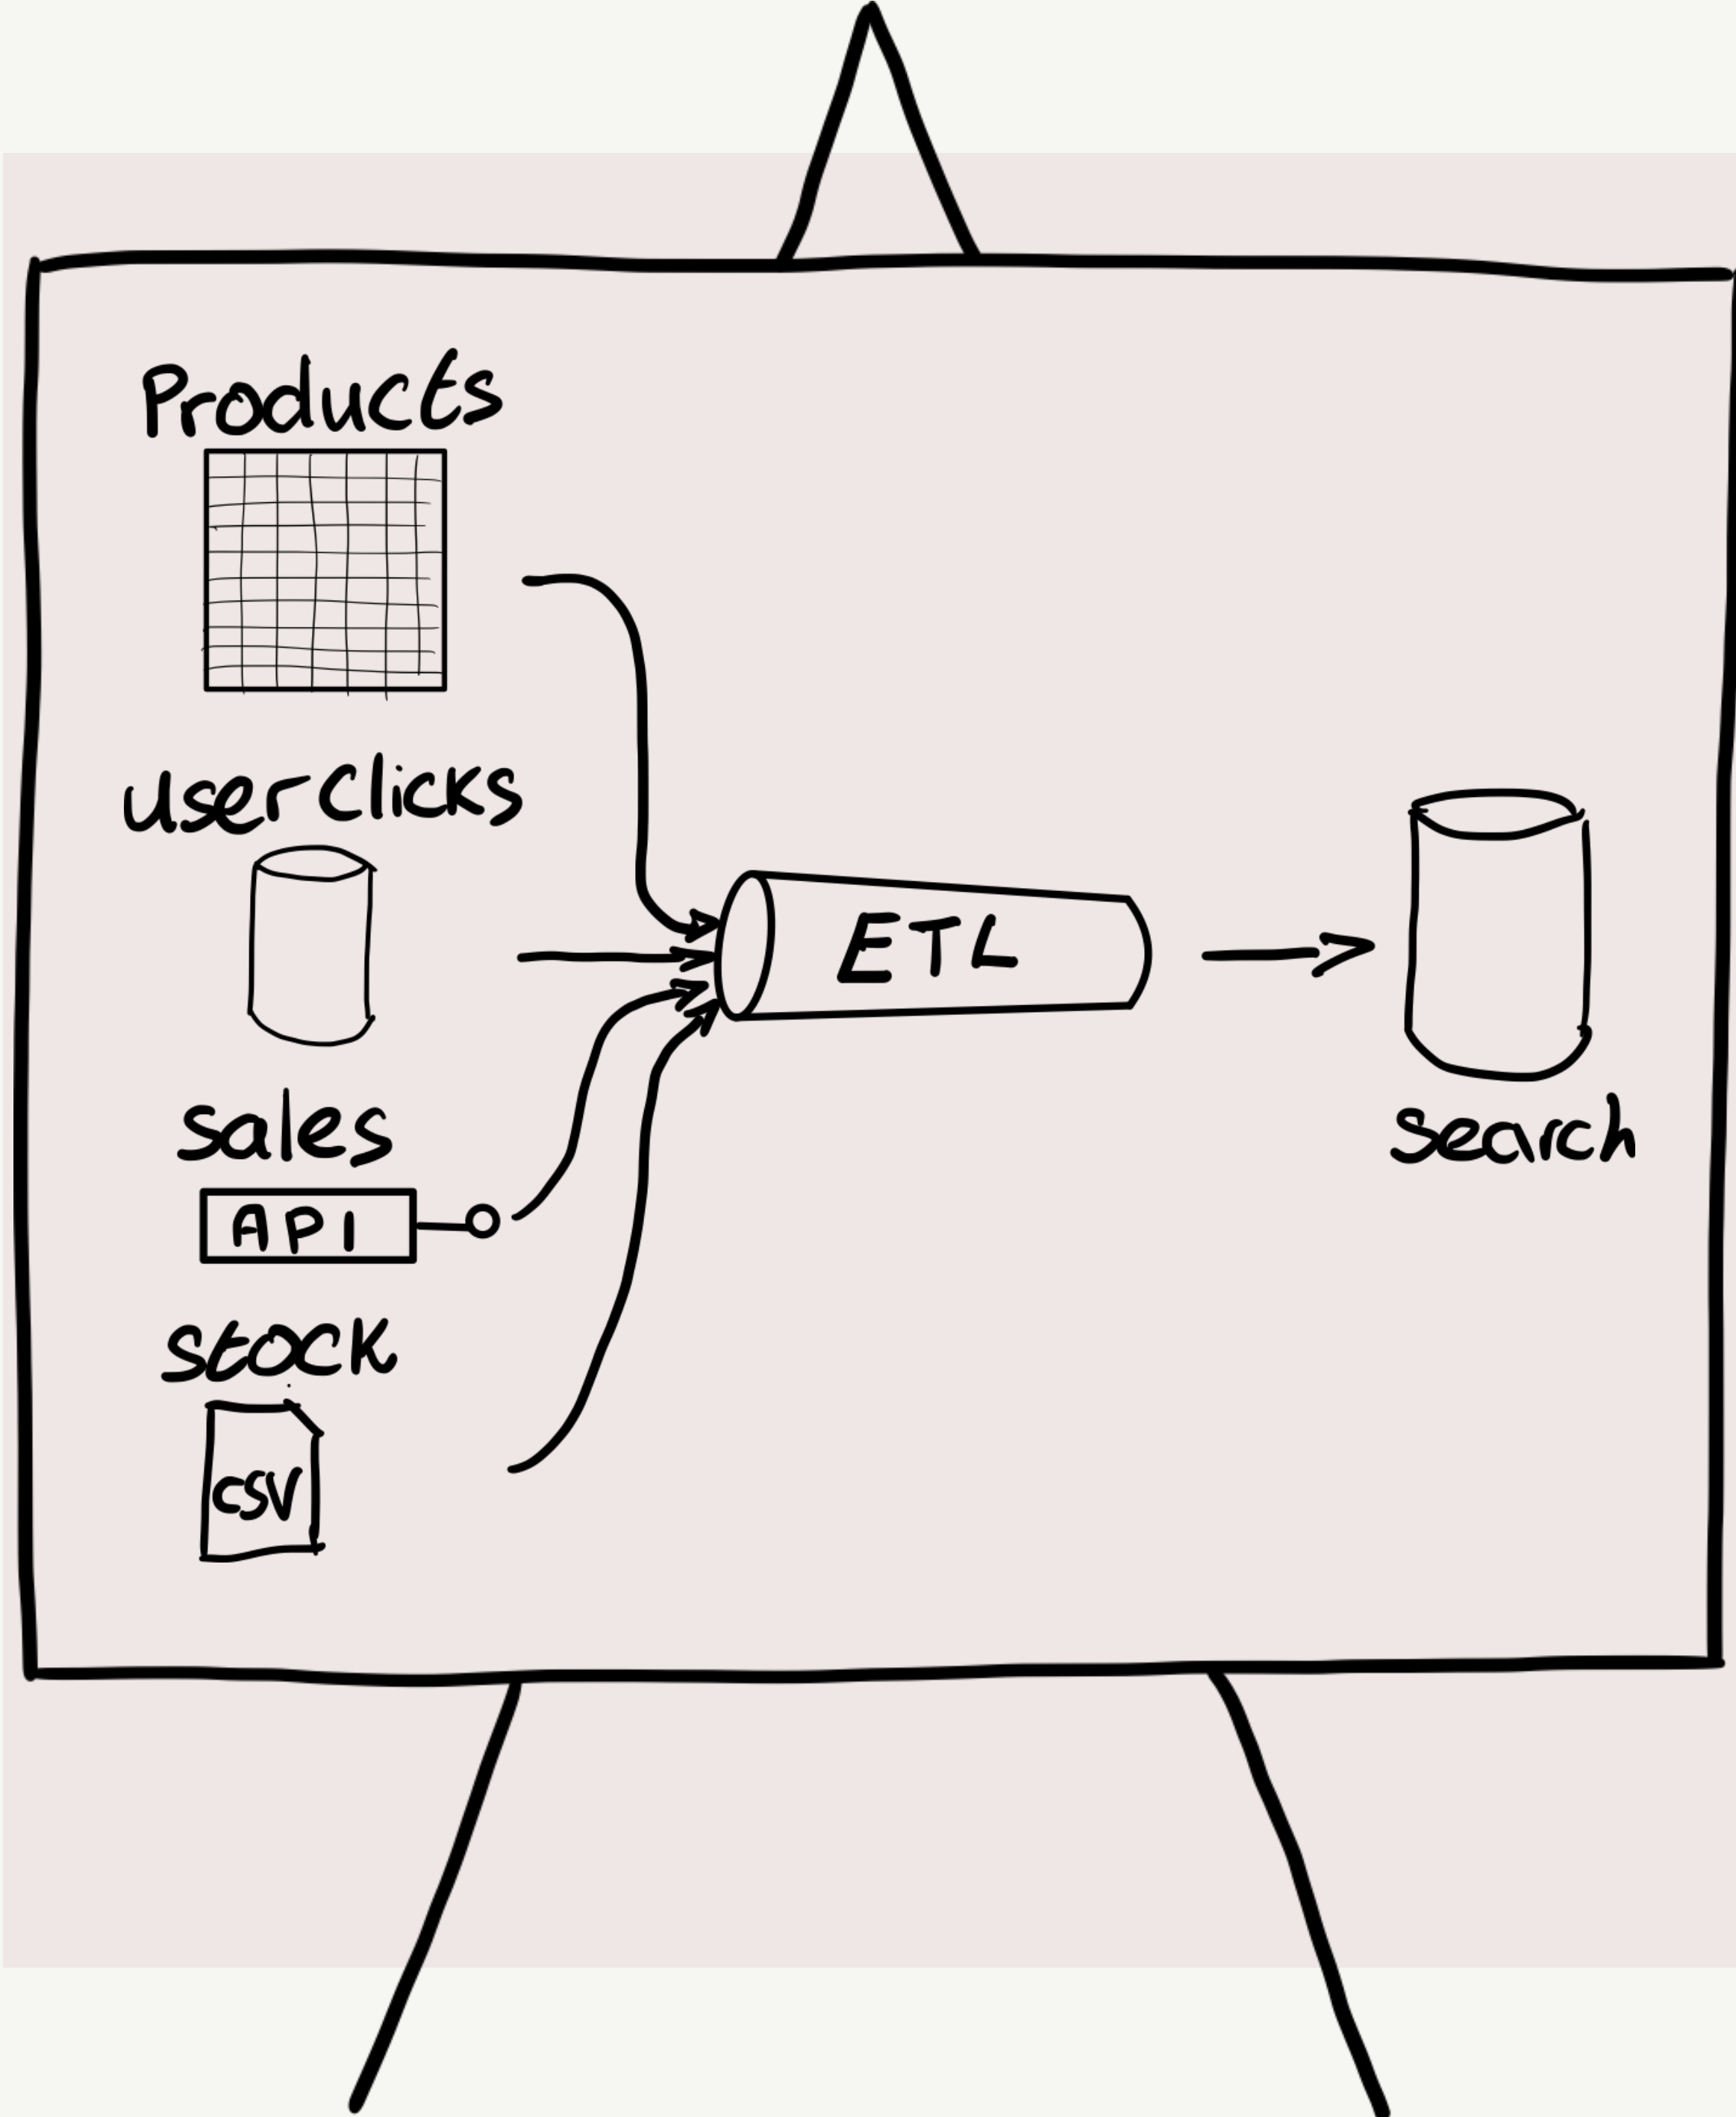

Different sources to read content from.

I have a few questions about the content.

What does the content look like?

Update Frequency of content?

Full Import or updates?

Quality of content?

Who controls the content?

Extract info from raw content?

products\_dagster.py 1

```

Create a new index without downtime.

- **What your content looks like**
- **Frequency of updates and full import**
- **Sources and how to combine them**

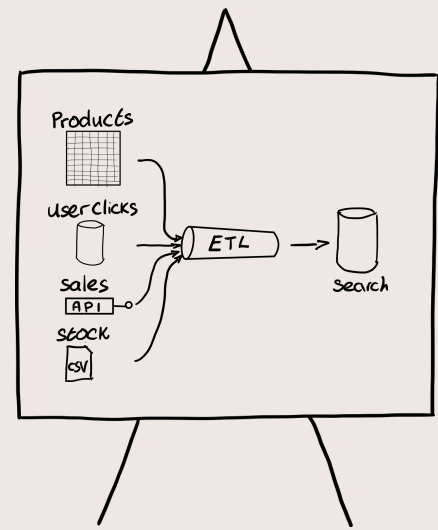

---

## **Understand you content**

---

**Topic 2**

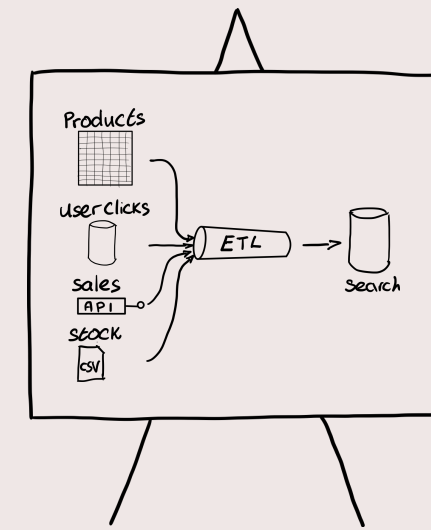

Time to import the content now?

We have to talk about the content schema

I thought a search DB is schema less!

We need to map our content to the way we want to query it

Match, Filter, Aggregation

Show the content

Dynamic Mapping

Explicit field mapping

Multi-purpose field mapping

```
{
  "index_patterns": ["products-*"],
  "priority": 10,
  "template": {
    "mappings": {
      "properties": {
        "category": {
          "type": "keyword"
        },
        "description": {
          "type": "text"
        }
      }
    }
  },
  "composed_of": [
    "jc_settings",
    "jc_dynamic_template"
  ],
  "version": 2
}
```

```
{
  "template": {
    "settings": {
      "number_of_shards": 1,
      "number_of_replicas": 0
    }
  },
  "version": 1
}
```

```
{
  "template": {
    "mappings": {
      "dynamic_templates": [
        {
          "strings": {
            "match_mapping_type": "string",
            "mapping": {
              "type": "text",
              "fields": {
                "keyword": {
                  "type": "keyword",
                  "ignore_above": 256
                }
              }
            }
          }
        }
      ]
    }
  },
  "version": 1
}
```

- **Add a mapping for fields based on usage patterns**
- **Use dynamic, explicit and multi-purpose fields**

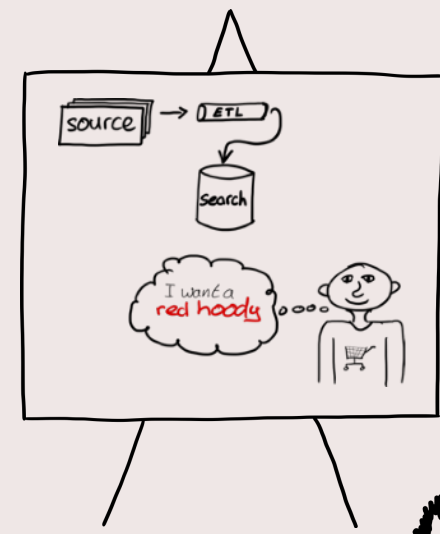

---

**Use a schema for your content**

---

**Topic 3**

How can customers find products?

We transform a question into a query

Search, query, question, what do you mean?

  "size": 10
}
```

- **A users question contains text and filters**
- **Response contains results plus help to make question more specific**

---

**Transform a question into a query**

---

**Topic 4**

I am excited to start,  
but I still have so  
many questions

What if user makes a typo?

What if user uses other words?

What if we have too many results?

What if one category is more important?

What if some products are more popular?

Synonyms, stemming

Fuzzy, ngrams

LLM, Vector Search

Boosting / LTR

No match between  
question and  
documents

Too many documents  
match the question

- **What if a question does not match results?**
- **What if a question has too many results?**

---

**Relax matching and use boosting**

---

**Topic 5**

Abbreviations

Opening times

Return policies

Narrow vs Wide

Some questions are  
not about a product

jeans

CATEGORIES

- Straight
- slim
- relaxed
- more...

COLORS

- black
- blue

- **Not all questions point to a single or set of results (products in our case)**

---

**When search is not the answer**

---

**Topic 6**

How do we know what customers need?

Log whatever they do, how they interact.

Exactly, analytics combined with our domain knowledge.

sales per search session in time

Click Through Rate

Business Effect of Search

Search terms used

Clicks

Link with Google Analytics

Click Through Rate

Lots of things to log  
to get more insights

- Create a search session id
- User search terms with results
- Clicks with position in result for search terms
- Sales after a search

- **Think about analytics when building your search solution**
- **Have metrics to support KPI's in a dashboard**

---

**Log visitor activities and learn from them**

---

**Topic 7**

Can we check for improvements before production?

I like your thinking, yes we can do that.

We need a judgement list and verify our results against the list.

?

Look at an example of a judgement list.

### Search Log

Query	#	Results	Click	Sale
jeans	1000	301	300	200
sweater	313	108	50	10
hoods	301	58	5	1
red hoods	803	51	3	0
yellow socks	985	287	0	0
hat	731	3	200	15
blue dress	707	37	15	7

Query	#
jaens	221
gucci	77
levi	23
purple socks	19
corn jeans	16
sunglasses	13
iphone	1

Query	#
jeans	77
levis	51
shirt	17
cargo	13
hoods	9
flower	7
adidas	3

Query	Relevant ID's
jeans	017, 087, 084, 172, 198, ...
sweater	054, 021, 087, 321, 371
red hoods	271, 272, 273, 691, 617
jaens	017, 087, 084, 172, 198
Cargo	003, 008, 179, 231, 317
yellow socks	291, 517, 562, 609, 612
hat	109, 246, 278, 213, 299

Calculate a  
Judgement Score

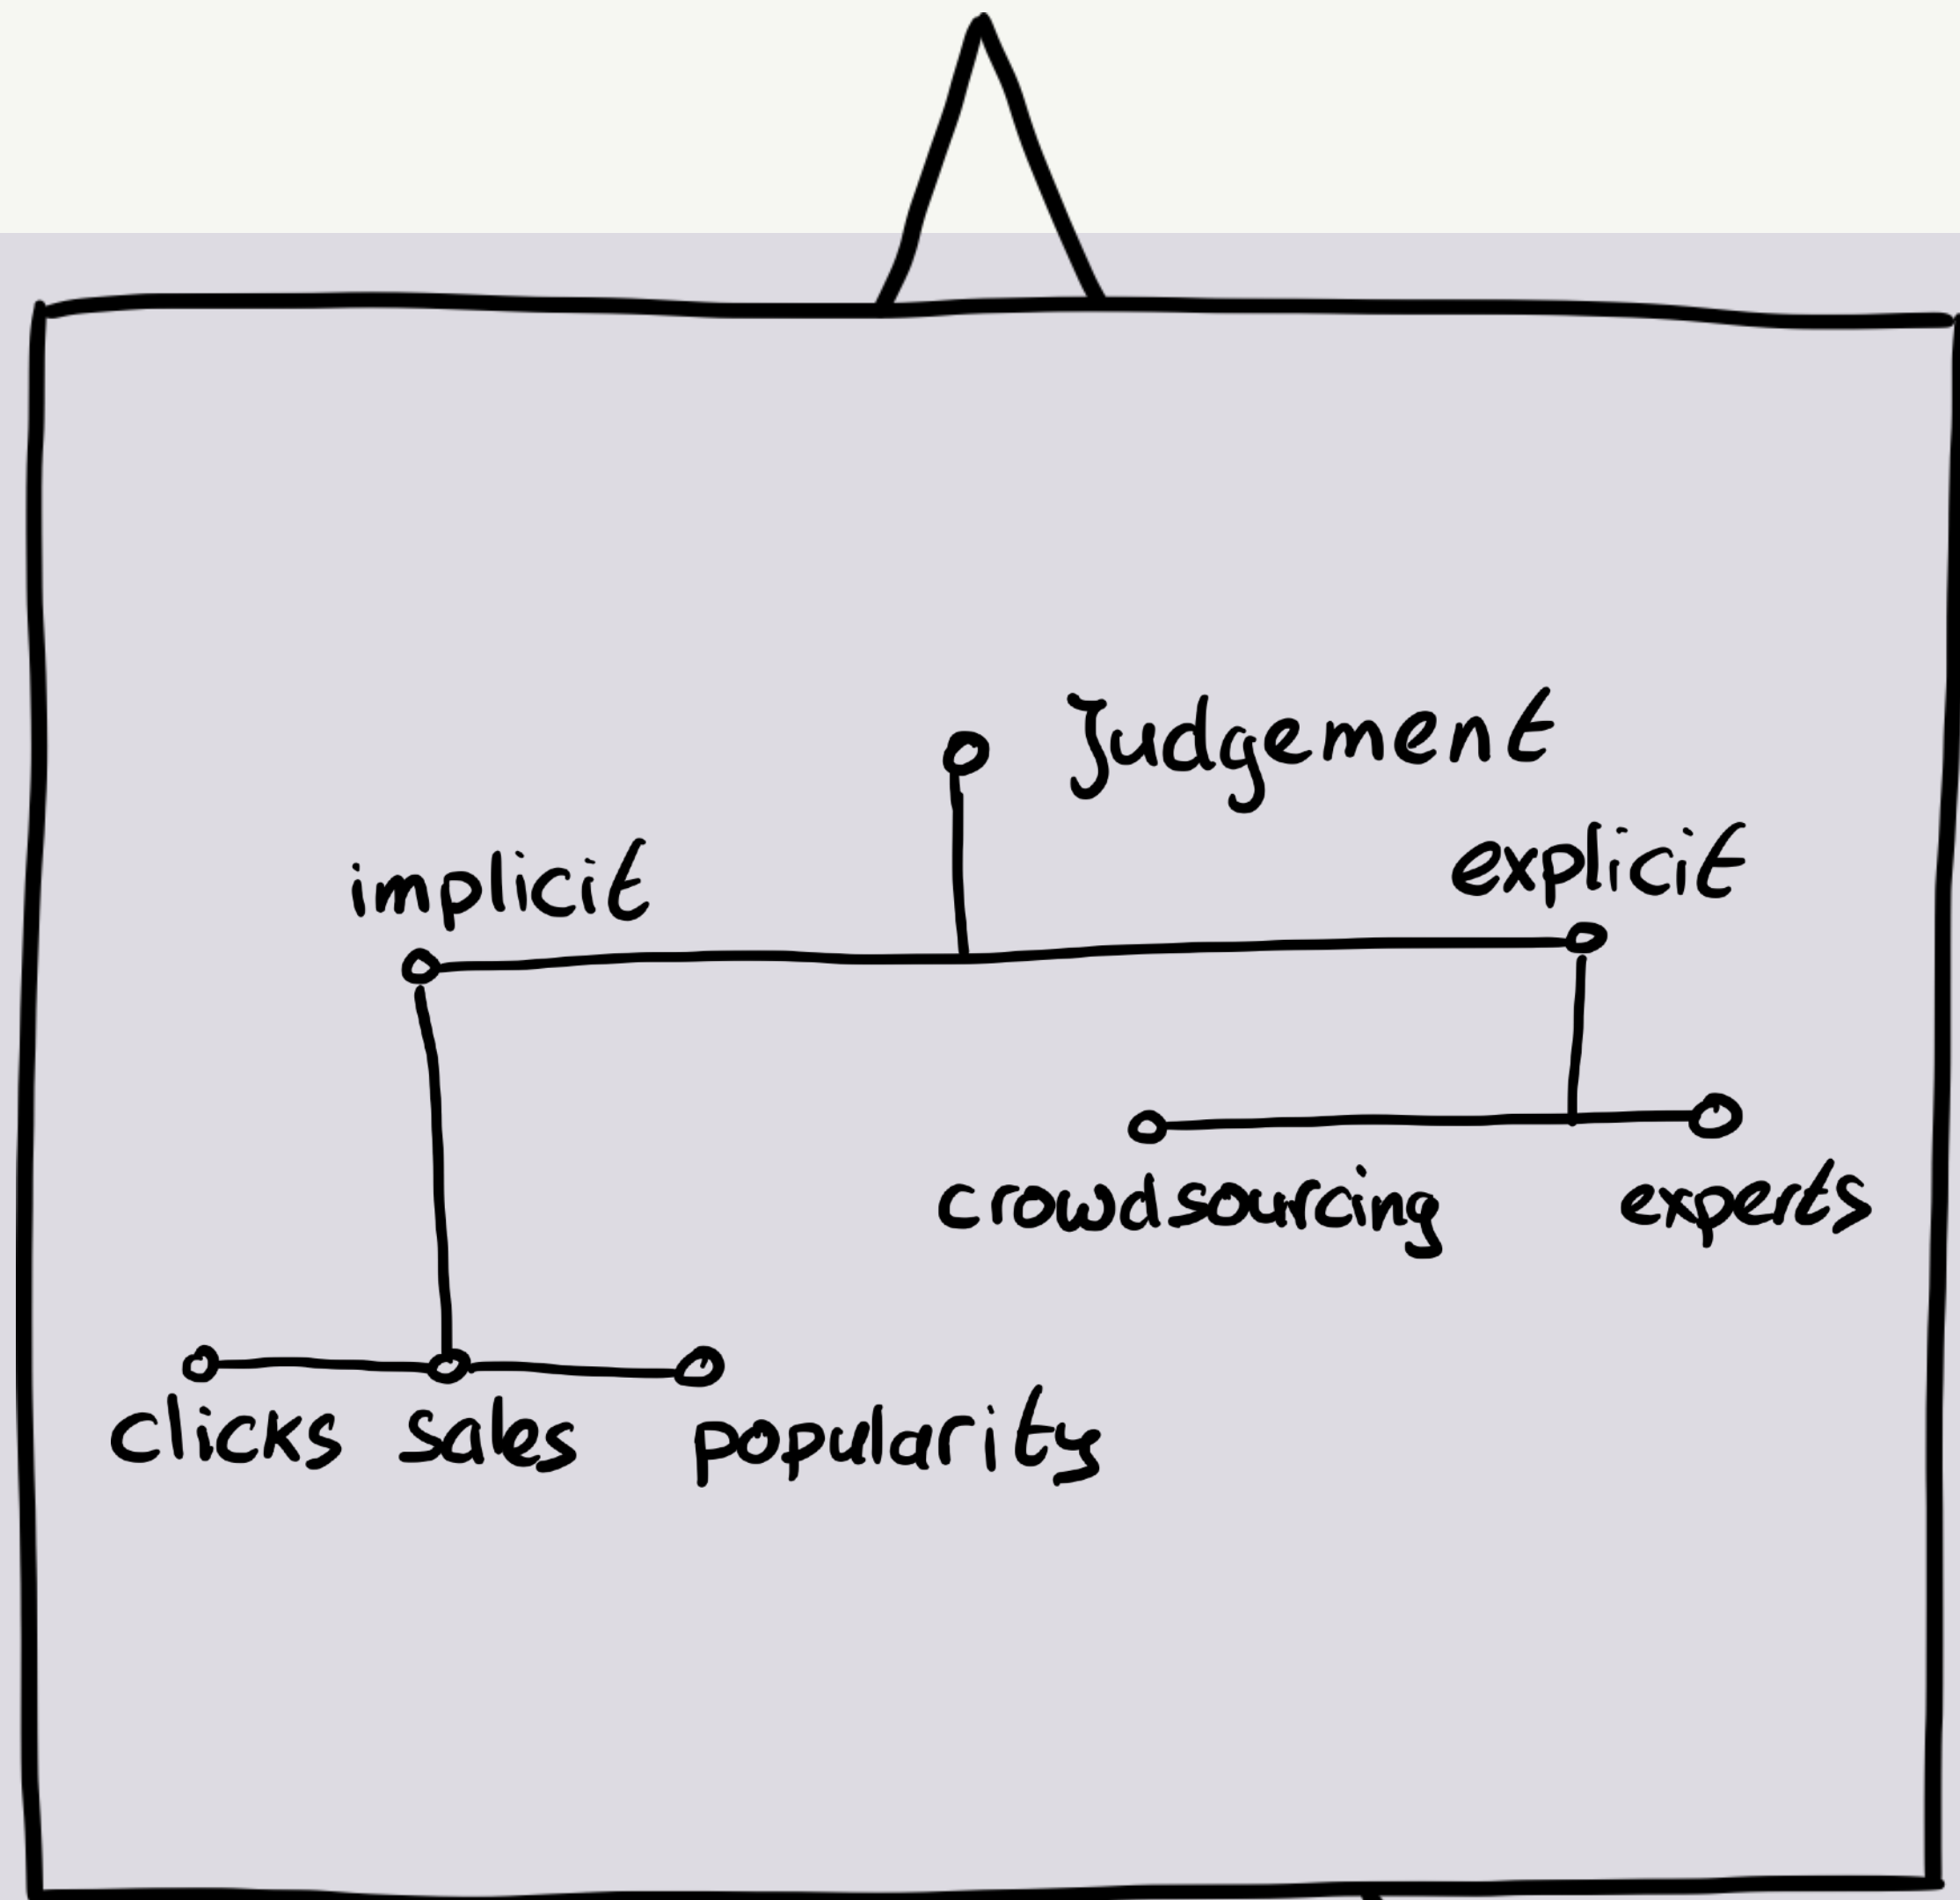

## Mean Average Precision

$$AP = \frac{1}{D_{rel}} \sum_{k=1}^n P(k) \cdot R(k)$$

ID	rel
017	True
023	False
084	True
191	False
198	True

$$\begin{aligned} P(1) &= \frac{1}{1} \cdot 1 = 1 \\ P(2) &= \frac{1}{2} \cdot 0 = 0 \\ P(3) &= \frac{2}{3} \cdot 1 = 0,66 \\ P(4) &= \frac{2}{4} \cdot 0 = 0 \\ P(5) &= \frac{3}{5} \cdot 1 = 0,6 \\ \hline &2,26 \end{aligned}$$

$$AP = \frac{1}{5} \cdot 2,26 = 0,452$$

Where do these judgements come from?

- Obtain judgements from experts or stats
- Embed calculating offline scores in your process

---

**Use a judgement list to verify results**

---

**Topic 8**

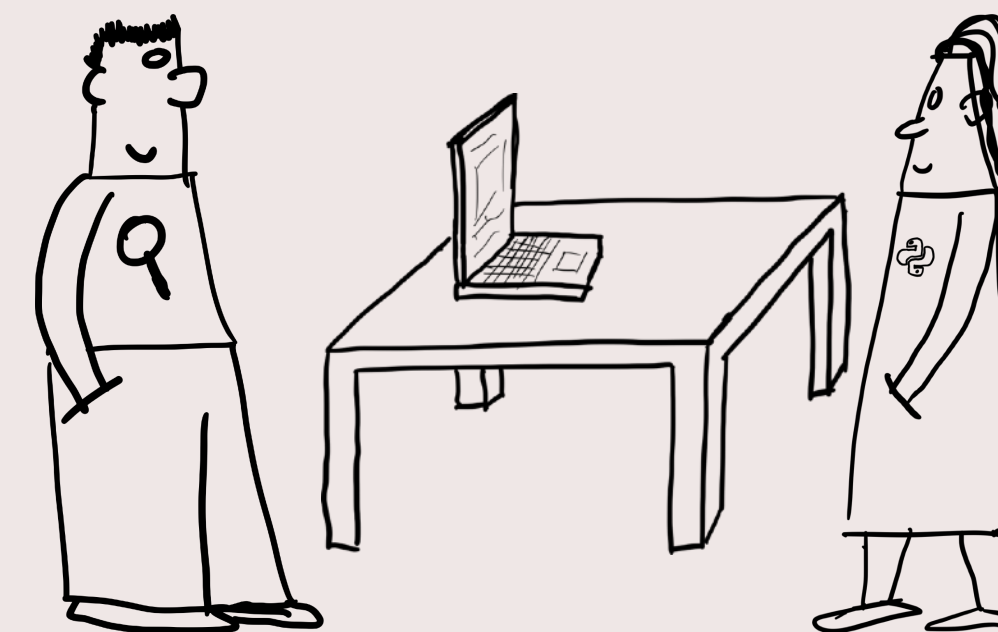

I implemented a search service. I can change the query and enter search terms.

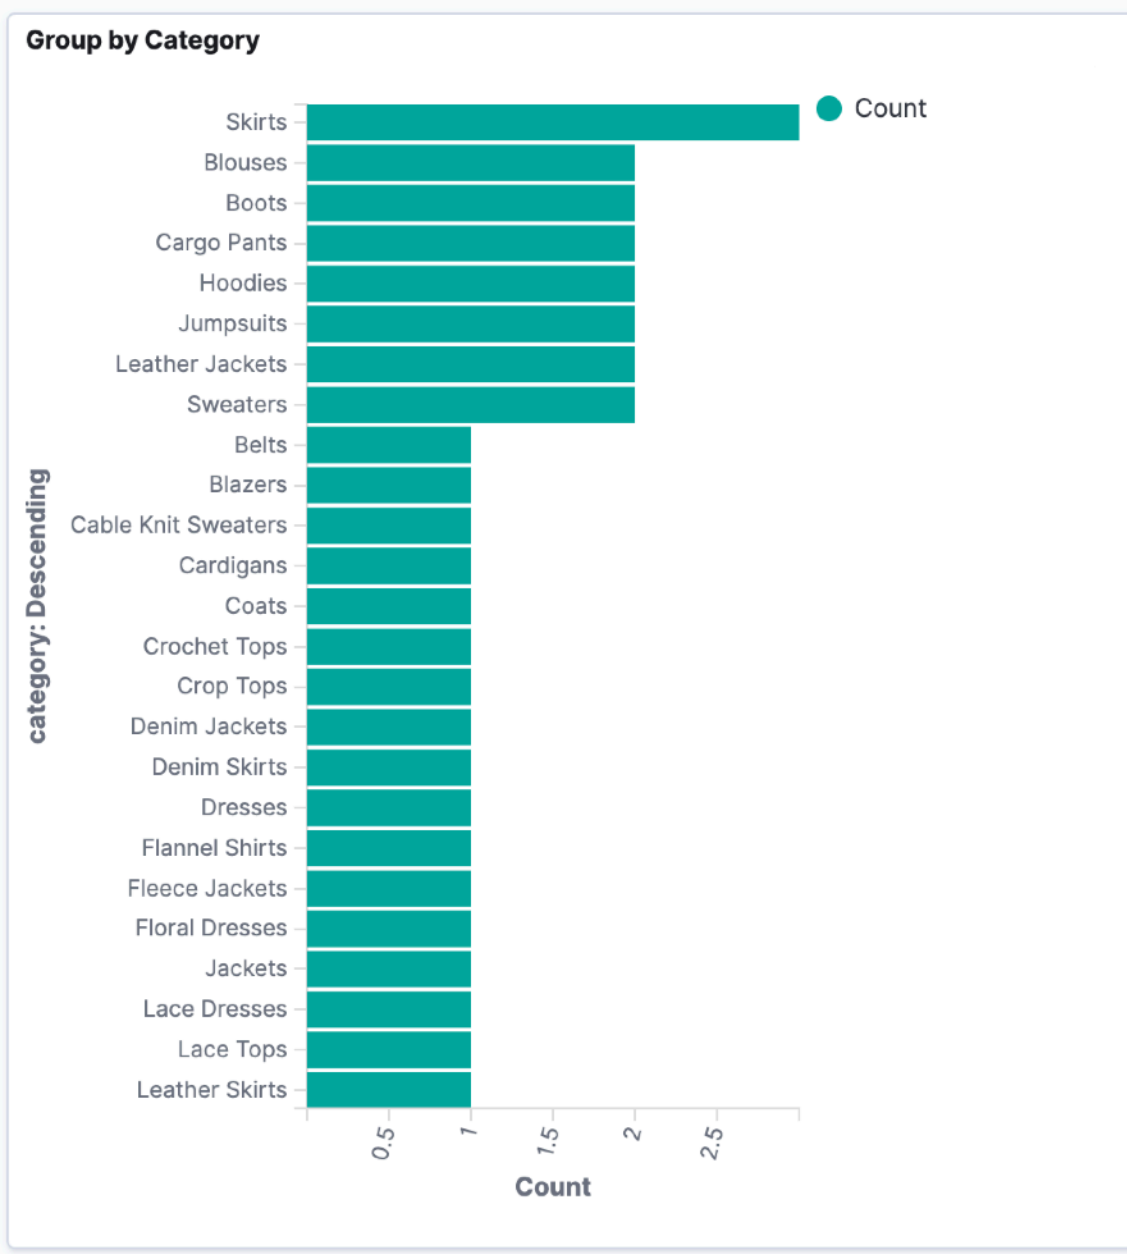

Good job, good way to start testing.

What if the results are not as expected?

+ Add filter

<b>Num Products</b> <b>50</b>	<b>Number of Clicks</b> <b>27,389</b>	<b>Number Sold</b> <b>238</b>

### Query 1

Index: products-20230416090324

Query

```

2- "query": {
3-   "bool": {
4-     "must": [
5-       {
6-         "multi_match": {
7-           "query": "%SearchText%",
8-           "fields": ["name", "description"],
9-           "type": "cross_fields"
10-        }
11-      }
12-     ]
13-   }
14- }

```

Enter a query in OpenSearch Query DSL. Use %SearchText% to refer to the text in the search bar.

### Query 2

Index: products-20230416090324

Query

```

2- "query": {
3-   "bool": {
4-     "must": [
5-       {
6-         "multi_match": {
7-           "query": "%SearchText%",
8-           "fields": ["name", "description"],
9-           "type": "best_fields"
10-        }
11-      }
12-     ]
13-   }
14- }

```

Enter a query in OpenSearch Query DSL. Use %SearchText% to refer to the text in the search bar.
